Installing MATLAB

MathWorks is providing you access to MATLAB for use in your coursework. When planning your activity, please note that access is valid for the length of the course (12 weeks).

Step 1: Enter your email to create a MathWorks account if you do not have one.

Step 2: Use this link again to download and install. You may need to log-in to your MathWorks account that you created in Step 1. After starting the installer, accept all defaults and log-in to your MathWorks account when prompted.

For additional resources, including an introduction to the MATLAB interface, please see "More Octave/MATLAB Resources."
